Categories: Intraoral Cameras

Description

The **Double Touch Intraoral Camera USB** is a high-quality imaging device designed to capture minute details of the oral cavity, enhancing diagnosis and improving communication with patients and the dental team. Thanks to its **USB connection** and included software, it can be easily connected to multiple PCs across different working environments.

Equipped with **dual image capture buttons** located on both the front and rear of the handpiece, it allows effortless capture of images from both upper and lower arches. Its deep depth of field, ergonomic design, and intuitive controls make it remarkably easy to use, while the **autofocus and adjustable LED lighting** ensure crystal-clear, detailed images in any clinical condition.

Lightweight, portable, and reliable, the Double Touch Camera is the ideal tool for professionals who require **high-resolution intraoral imaging** to increase diagnostic accuracy and strengthen patient trust.

Key Features

- HD image quality with **1080P 30FPS resolution**
- **1-4X zoom function** (720p resolution)
- Adjustable **LED illumination**
- Dual capture buttons on the handpiece
- USB connection with **2.5 m cable**

- Wide compatibility with Windows XP, Vista, 7, 8, 10, 11 (32/64-bit)
- Lightweight handpiece for comfortable use
