Surgical equipment trolley Easy Tray white, without trays / shelves

Available

SKU: DE1003BI.00

Categories: Equipment Carts

Description

The *surgical equipment trolley* Easy Tray in white, supplied without trays, is designed to provide a clean, organised and highly functional workstation within dental, surgical and medical environments. Built from stainless steel, it offers excellent strength and durability, while the integrated electrified structure keeps all wiring concealed to maintain an uncluttered workspace. The tray-free configuration allows clinicians to tailor the trolley to their operational needs, with the option of fitting trays in different sizes.

Its modular design supports a wide selection of accessories, including a front arm for instrument holders, an articulated monitor mount, an IV pole and trays available in two dimensions. The internal cable-management system ensures a tidy, ergonomic working area, free from obstructions during surgical procedures.

The surgical equipment trolley Easy Tray white without trays provides an efficient and practical solution for organising and powering complementary devices such as surgical micromotors, piezo units, lasers, electrosurgical systems, whitening devices and multiparameter monitors, creating a streamlined and fully integrated clinical workstation.
