

Scaling tip for scaler, Mectron S2 compatible

Scaling tip for processing interproximal surfaces and posterior areas. Mectron S2 compatible

Available

SKU: PG069M

Categories: Mectron - Woodpecker

Description

Scaling tip for scaler, Mectron S2 compatible.

Dental scaling, defined as the removal of supragingival, subgingival and interdental calculus and stains, is a core procedure in the daily clinical practice of dentists and dental hygienists.

This scaling insert is manufactured using **high-strength materials**, making it suitable for use at **high power settings**, an essential requirement for effective and controlled calculus removal.

The tips designed for **subgingival use** feature **reduced dimensions and limited oscillation**, allowing safe and precise access even in anatomically challenging areas while ensuring optimal patient comfort.

The **spray system**, perfectly aligned and tangential to the tip, provides efficient cooling of the treatment area, contributing to clinical safety and procedural comfort.

This scaling tip is specifically intended for the treatment of **interproximal surfaces and posterior areas**, where access and visibility are more demanding.

Compatibility Scaling tip for scaler: Mectron S2 compatible.
